Education

Shri Ramdeobaba College of Engineering and Management <i>B.Tech Computer Science and Engineering: (CGPA: 7.71/ 10)</i>	2023-2027 Nagpur, Maharashtra
Tejaswini Junior College <i>HSC: 76</i>	2023 Nagpur, Maharashtra
Sacred Heart Academy, CBSE <i>SSC: 92.4</i>	2021 Nagpur, Maharashtra

Projects

Student Analytics System | *Java, SQL, React, HTML, CSS, JavaScript*

- Designed a full-stack web application to track and analyze student attendance and academic performance.
- Implemented backend logic in Java with SQL database integration to manage student, attendance, and marks data.
- Developed a basic React frontend and integrated it with the backend using REST-style APIs.

Solar Stable – Android Application (Java) | *Java, Android Studio*

- Developed an Android application to monitor and calculate solar panel efficiency using real-time IoT sensor data.
- Integrated sensor parameters such as voltage, current, irradiance, and temperature to compute power output and efficiency.
- Implemented efficiency-based maintenance alerts and displayed historical performance records.

Tata Sales n Quants – Online Retail Sales and Customer Insights | *Mini Internship Project – Tata Group*

- Built an interactive Power BI dashboard to analyze retail revenue, sales trends, and country-wise performance.
- Performed customer segmentation (RFM analysis) to identify high-value customer groups.
- Generated business insights to support data-driven sales and decision-making.

Gold Price Trend Analysis | *Python, Data Analysis*

- Analyzed 20 years of historical gold price data to identify long-term trends, volatility, and price behavior using Python.
- Performed EDA with moving averages and visualizations (matplotlib, seaborn) to derive data-driven insights.

Internship

Front End Web Development Intern (Trainee) | *AICTE–Edunet Foundation – IBM SkillsBuild Program*

- Selected for a 6-week AICTE-certified online internship focused on front-end web development fundamentals.
- Completed structured training and self-paced modules on the IBM SkillsBuild platform.
- Developed a mentor-guided project and delivered a final project presentation.

Achievements

Smackathon 2025 (National-Level Hackathon Finalist) | *Backend Developer – Red Connect*

- Developed backend architecture and RESTful APIs for a real-time blood donation optimization platform.
- Designed and optimized database schemas for blood units, expiry tracking, and donor profiles.
- Collaborated with the team to deliver core features under 24-hour hackathon constraints.

Autonomous Obstacle-Avoiding Robot | *Arduino-Based Project*

- Designed and built an Arduino Uno-based autonomous robot capable of obstacle detection and automatic movement.
- Integrated ultrasonic sensor and servo motor for real-time distance measurement and directional navigation.
- Implemented embedded control logic to enable autonomous decision-making based on sensor inputs.

Technical Skills

Languages: Java, Python, SQL, JavaScript, C

Data, Analytics and IoT: Power BI, Excel, pandas, NumPy, Matplotlib, Seaborn, Embedded Systems (Arduino, Sensors and Actuators)

Web, Android and Tools: HTML, CSS, React, Android Studio (Basics), Git and GitHub, VS Code, IntelliJ IDEA, Eclipse, Jupyter Notebook

Core CS Concepts: Data Structures and Algorithms, Object-Oriented Programming (OOP), DBMS and SQL, Operating Systems, REST API Concepts
